

ENERGY RECOVERY VENTILATION: THE PROVEN ADVANTAGES OF HEAT AND HUMIDITY TRANSFER

Improves Indoor Air Quality

By providing simultaneous exhaust and fresh air supply, RenewAire reduces the concentration of harmful pollutants in indoor air - an absolute must in schools, offices and smoking environments.

Meets Ventilation Codes for Air Exchange

Provides ample ventilation to meet ASHRAE 62 and the International Mechanical Code that now requires two to three more air exchanges than in the past.

Controls Excess Moisture

Unlike conventional ventilation or basic heat exchangers, RenewAire moderates not only the temperature but the humidity content of incoming air, limiting humidity swings and associated biologic growths.

Optimum Cold Weather Performance

Recaptures heat otherwise lost to exhaust air while controlling humidity extremes. This greatly reduces the demand on heating equipment - lowering both initial costs and energy bills. Also protects heating coils from freeze damage.

Optimum Warm Weather Performance

Pre-cools and dehumidifies the fresh airstream by transfer of heat and humidity to the exhaust airstream. This greatly reduces air conditioning demand - lowering both initial costs and energy bills. On retrofits, the ventilation rate of existing A/C equipment can be as much as doubled.

Energy Saved = Dollars Saved

RenewAire's all-weather performance can cut annual energy bills for heating, cooling and dehumidification of ventilation air by 50% or more.

Indoor Air Quality Problems Solved!

Ideal for Hot or Cold Environments
